特徴

WD40 repeat proteins are key components of many essential biologic functions.
They regulate the assembly of multiprotein complexes by presenting a beta-propeller p latform for simultaneous and reversible protein-protein interactions.
Members of the WIPI subfamily of WD40 repeat proteins, such as WIPI2, have a 7-blad ed propeller structure and contain a conserved motif for interaction with phospholipids (Proikas-Cezanne et al., 2004 [PubMed 15602573]).
