特徴

KIRR3 is a member of the nephrin-like protein family.

These proteins are expressed in fetal and adult brain, and also in podocytes of kidney glomeruli.

The cytoplasmic domains of these proteins interact with the C-terminus of podocin, also expressed in the podocytes, cells involved in ensuring size- and charge-selective ultrafiltration.

Mutations in this gene are associated with mental retardation autosomal dominant type 4 (MRD4).

Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
